## **DOK5 Human shRNA Plasmid Kit (Locus ID 55816)**

### **Product data:**

**Product Type:** shRNA Plasmids

**Product Name:** DOK5 Human shRNA Plasmid Kit (Locus ID 55816)

Locus ID:

C20orf180; IRS-6; IRS6 Synonyms:

pRS (TR20003) Vector:

E. coli Selection: Ampicillin Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

DOK5 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = Components:

55816). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

NM 001294161, NM 018431, NM 177959, NM 018431.1, NM 018431.2, NM 018431.3, RefSeq:

NM 018431.4, NM 001294161.1, NM 177959.1, NM 177959.2, BC008992, NM 001294161.2,

NM 177959.3, NM 018431.5

UniProt ID: Q9P104

Summary: The protein encoded by this gene is a member of the DOK family of membrane proteins,

> which are adapter proteins involved in signal transduction. The encoded protein interacts with phosphorylated receptor tyrosine kinases to mediate neurite outgrowth and activation of the MAP kinase pathway. Unlike other DOK family proteins, this protein does not interact with RASGAP. This protein is up-regulated in patients with systemic sclerosis and is associated with fibrosis induced by insulin-like growth factor binding protein 5. Alternative splicing of

this gene results in multiple transcript variants. [provided by RefSeq, Jun 2014]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

> be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
