

Product datasheet for TR318792

TIMP2 Human shRNA Plasmid Kit (Locus ID 7077)

Product data:

Product Type: shRNA Plasmids

Product Name: TIMP2 Human shRNA Plasmid Kit (Locus ID 7077)

Locus ID: 7077

Synonyms: CSC-21K; DDC8

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell

Puromycin

Selection:

Format: Retroviral plasmids

Components: TIMP2 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

7077). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 003255, NM 003255.1, NM 003255.2, NM 003255.3, NM 003255.4, BC071586,

BC071586.1, BC010410, BC039613, BC040039, BC040445, BC052605, NM 003255.5

UniProt ID: P16035

Summary: This gene is a member of the TIMP gene family. The proteins encoded by this gene family are

natural inhibitors of the matrix metalloproteinases, a group of peptidases involved in

degradation of the extracellular matrix. In addition to an inhibitory role against

metalloproteinases, the encoded protein has a unique role among TIMP family members in its ability to directly suppress the proliferation of endothelial cells. As a result, the encoded protein may be critical to the maintenance of tissue homeostasis by suppressing the

proliferation of quiescent tissues in response to angiogenic factors, and by inhibiting

protease activity in tissues undergoing remodelling of the extracellular matrix. [provided by

RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
