

Product datasheet for TR319881

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

p57 Kip2 (CDKN1C) Human shRNA Plasmid Kit (Locus ID 1028)

Product data:

Product Type: shRNA Plasmids

Product Name: p57 Kip2 (CDKN1C) Human shRNA Plasmid Kit (Locus ID 1028)

Locus ID: 1028

Synonyms: BWCR; BWS; KIP2; p57; p57Kip2; WBS

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

CDKN1C - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

1028). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 000076, NM 001122630, NM 001122631, NM 000076.1, NM 000076.2, NM 001122630.1,

NM 001122631.1, BC067842, BC067842.1, BC039188, BM673714, NM 001362474,

NM 001362475, NM 001122631.2

UniProt ID: P49918

Summary: This gene is imprinted, with preferential expression of the maternal allele. The encoded

protein is a tight-binding, strong inhibitor of several G1 cyclin/Cdk complexes and a negative regulator of cell proliferation. Mutations in this gene are implicated in sporadic cancers and Beckwith-Wiedemann syndorome, suggesting that this gene is a tumor suppressor candidate. Three transcript variants encoding two different isoforms have been found for this gene.

[provided by RefSeq, Oct 2010]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
