Product datasheet for TR320346

Estrogen Receptor 1 (ESR1) Human shRNA Plasmid Kit (Locus ID 2099)

Product data:

Product Type:	shRNA Plasmids
Product Name:	Estrogen Receptor 1 (ESR1) Human shRNA Plasmid Kit (Locus ID 2099)
Locus ID:	2099
Synonyms:	ER; Era; ESR; ESRA; ESTRR; NR3A1
Vector:	pRS (TR20003)
E. coli Selection:	Ampicillin
Mammalian Cell Selection:	Puromycin
Format:	Retroviral plasmids
Components:	ESR1 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = 2099). 5μg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.
RefSeq:	<u>NM 000125, NM 001122740, NM 001122741, NM 001122742, NM 001291230,</u> <u>NM 001291241, NM 001328100, NM 000125.1, NM 000125.2, NM 000125.3,</u> <u>NM 001122740.1, NM 001122741.1, NM 001122742.1, NM 001291241.1, NM 001291230.1,</u> <u>BC128573, BC128574</u>
UniProt ID:	<u>P03372</u>
Summary:	This gene encodes an estrogen receptor and ligand-activated transcription factor. The canonical protein contains an N-terminal ligand-independent transactivation domain, a central DNA binding domain, a hinge domain, and a C-terminal ligand-dependent transactivation domain. The protein localizes to the nucleus where it may form either a homodimer or a heterodimer with estrogen receptor 2. The protein encoded by this gene regulates the transcription of many estrogen-inducible genes that play a role in growth, metabolism, sexual development, gestation, and other reproductive functions and is expressed in many non-reproductive tissues. The receptor encoded by this gene plays a key role in breast cancer, endometrial cancer, and osteoporosis. This gene is reported to have dozens of transcript variants due to the use of alternate promoters and alternative splicing, however, the full-length nature of many of these variants remain uncertain. [provided by RefSeq, Jul 2020]

	Estrogen Receptor 1 (ESR1) Human shRNA Plasmid Kit (Locus ID 2099) – TR320346
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .
Performance Guaranteed:	OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.
	For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
