

## Product datasheet for TR501126

## Itih3 Mouse shRNA Plasmid (Locus ID 16426)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** Itih3 Mouse shRNA Plasmid (Locus ID 16426)

Locus ID:

AW108094; In; Intin3; ITI-HC3; Itih; Itih-3 Synonyms:

Vector: pRS (TR20003)

E. coli Selection: Ampicillin Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Itih3 - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = Components:

16426). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

BC015276, NM 008407, NM 008407.1, NM 008407.2 RefSeq:

**UniProt ID:** Q61704

This gene encodes one of the heavy subunits of inter alpha trypsin inhibitor that functions as **Summary:** 

> a protease inhibitor circulating in the plasma. The encoded protein undergoes proteolytic processing to generate a mature glycoprotein that is linked to the other subunits via an ester bond between the C-terminal aspartic acid residue and the N-acetyl galactosamine residue of chondroitin sulfate. This gene is located in a cluster of related inter alpha trypsin inhibitor

genes on chromosome 14. [provided by RefSeq, Oct 2015]

These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design:

> be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
