

Product datasheet for TR501498

Uhrf1 Mouse shRNA Plasmid (Locus ID 18140)

Product data:

Product Type: shRNA Plasmids

Product Name: Uhrf1 Mouse shRNA Plasmid (Locus ID 18140)

Locus ID: 18140

Synonyms: AL022808; ICBP90; Np95; RNF106

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: Uhrf1 - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

18140). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: BC022167, NM 001111078, NM 001111079, NM 001111080, NM 010931, NM 001111078.1,

NM 010931.1, NM 010931.2, NM 010931.3, NM 001111079.1, NM 001111080.1

UniProt ID: Q8VDF2

Summary: Multidomain protein that acts as a key epigenetic regulator by bridging DNA methylation and

chromatin modification. Specifically recognizes and binds hemimethylated DNA at replication

forks via its YDG domain and recruits DNMT1 methyltransferase to ensure faithful

propagation of the DNA methylation patterns through DNA replication. In addition to its role in maintenance of DNA methylation, also plays a key role in chromatin modification: through its tudor-like regions and PHD-type zinc fingers, specifically recognizes and binds histone H3 trimethylated at 'Lys-9' (H3K9me3) and unmethylated at 'Arg-2' (H3R2me0), respectively, and recruits chromatin proteins. Enriched in pericentric heterochromatin where it recruits different chromatin modifiers required for this chromatin replication. Also localizes to euchromatic regions where it negatively regulates transcription possibly by impacting DNA methylation and histone modifications. Has E3 ubiquitin-protein ligase activity by mediating the ubiquitination of target proteins such as histone H3 and PML. It is still unclear how E3

ubiquitin-protein ligase activity is related to its role in chromatin in vivo. May be involved in

DNA repair.[UniProtKB/Swiss-Prot Function]

shRNA Design:

These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
