

Product datasheet for TR501591

Furin Mouse shRNA Plasmid (Locus ID 18550)

Product data:

Product Type: shRNA Plasmids

Product Name: Furin Mouse shRNA Plasmid (Locus ID 18550)

Locus ID: 18550

Synonyms: 9130404I01Rik; Fu; Fur; PA; PACE; Pcs; Pcsk3; SP; SPC1

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: Furin - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

18550). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: BC048234, NM 001081454, NM 011046, NM 001081454.1, NM 001081454.2, NM 011046.1,

NM 011046.2, NM 011046.3, BC006686

UniProt ID: P23188

Summary: This gene encodes a calcium-dependent serine endoprotease that proteolytically activates

different proprotein substrates traversing the secretory pathway. The encoded protein undergoes proteolytic autoactivation during which an N-terminal propeptide is cleaved to generate the mature protein. Mice lacking the encoded protein die at an embryonic stage and display hemodynamic insufficiency, cardiac ventral closure defect, axial rotation defect and abnormal yolk sac vasculature. Alternative splicing results in multiple transcript variants.

[provided by RefSeg, Jul 2015]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
