

Product datasheet for TR503410

Fxyd6 Mouse shRNA Plasmid (Locus ID 59095)

Product data:

Product Type: shRNA Plasmids

Product Name: Fxyd6 Mouse shRNA Plasmid (Locus ID 59095)

Locus ID: 59095

Synonyms: 0610030I18Rik; P; Php

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

Components: Fxyd6 - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

59095). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: BC042579, BC051127, NM 022004, NM 022004.1, NM 022004.2, NM 022004.3, NM 022004.4,

NM 022004.5, NM 022004.6

UniProt ID: Q9D164

Summary: This reference sequence was derived from multiple replicate ESTs and validated by similar

human genomic sequence. This gene encodes a member of a family of small membrane proteins that share a 35-amino acid signature sequence domain, beginning with the sequence PFXYD and containing 7 invariant and 6 highly conserved amino acids. The approved human

gene nomenclature for the family is FXYD-domain containing ion transport regulator.

Transmembrane topology has been established for two family members (FXYD1 and FXYD2),

with the N-terminus extracellular and the C-terminus on the cytoplasmic side of the membrane. FXYD2, also known as the gamma subunit of the Na,K-ATPase, regulates the properties of that enzyme. FXYD1 (phospholemman), FXYD2 (gamma), FXYD3 (MAT-8), FXYD4

(CHIF), and FXYD5 (RIC) have been shown to induce channel activity in experimental

expression systems. This gene product, Fxyd6, is novel and has not been characterized as a protein. [RefSeq curation by Kathleen J. Sweadner, Ph.D., sweadner@helix.mgh.harvard.edu.,

shRNA Design:

These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
