

## **Product datasheet for TR503640**

## **Ska1 Mouse shRNA Plasmid (Locus ID 66468)**

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** Ska1 Mouse shRNA Plasmid (Locus ID 66468)

**Locus ID:** 66468

**Synonyms:** 2810433K01Rik; AV117428

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Selection:

Cell Puromycin

Format: Retroviral plasmids

Components: Ska1 - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector (Gene ID =

66468). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

**RefSeq:** BC019940, NM 001164355, NM 025581, NM 001164355.1, NM 025581.1, NM 025581.2,

NM 025581.3, NM 025581.4

UniProt ID: Q9CPV1

**Summary:** Component of the SKA1 complex, a microtubule-binding subcomplex of the outer

kinetochore that is essential for proper chromosome segregation. Required for timely anaphase onset during mitosis, when chromosomes undergo bipolar attachment on spindle microtubules leading to silencing of the spindle checkpoint. The SKA1 complex is a direct

component of the kinetochore-microtubule interface and directly associates with

microtubules as oligomeric assemblies. The complex facilitates the processive movement of microspheres along a microtubule in a depolymerization-coupled manner. Affinity for microtubules is synergistically enhanced in the presence of the ndc-80 complex and may allow the ndc-80 complex to track depolymerizing microtubules. In the complex, it mediates

the interaction with microtubules.[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
