

Product datasheet for TR509134

Igcb1 Mouse shRNA Plasmid (Locus ID 320299)

Product data:

Product Type: shRNA Plasmids

Product Name: Iqcb1 Mouse shRNA Plasmid (Locus ID 320299)

Locus ID: 320299

Synonyms: 6820449I09Rik; AV128382; NPHP5

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: Iqcb1 - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

320299). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: <u>BC029084, NM 177128, NM 177128.1, NM 177128.2, NM 177128.3, NM 177128.4</u>

UniProt ID: Q8BP00

Summary: Involved in ciliogenesis. The function in an early step in cilia formation depends on its

association with CEP290/NPHP6 (By similarity). Involved in regulation of the BBSome complex integrity, specifically for presence of BBS2 and BBS5 in the complex, and in ciliary targeting of selected BBSome cargos. May play a role in controlling entry of the BBSome complex to cilia

possibly implicating CEP290/NPHP6 (By similarity).[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
