

## Product datasheet for TR509537

## Trim30a Mouse shRNA Plasmid (Locus ID 20128)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** Trim30a Mouse shRNA Plasmid (Locus ID 20128)

Locus ID:

Synonyms: Rpt-1; Rpt1; Trim30

Vector: pRS (TR20003)

E. coli Selection: Ampicillin Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

Trim30a - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector (Gene ID = Components:

20128). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

BC005447, NM 009099, NM 001357467, NM 009099.1, NM 009099.2 RefSeq:

**UniProt ID:** P15533

Trans-acting factor that regulates gene expression of interleukin 2 receptor alpha chain. May **Summary:** 

> affect IL2R-alpha expression through cis-acting negative regulatory elements or through competition with proteins that bind to enhancer or activator sequences. Negatively regulates Toll-like receptor (TLR)-mediated activation of NFKB by promoting degradation of TAB2 and TAB3 and preventing TRAF6 autoubiquitination. Negatively regulates production of reactive oxygen species (ROS) which inhibits activation of the NLRP3 inflammasome complex. This, in turn, regulates activation of CASP1 and subsequent cleavage of IL1B and IL18. No activity

detected against a range of retroviruses including a number of lentiviruses, gammaretroviruses and betaretroviruses.[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

> be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
