

## **Product datasheet for TR511044**

## Pef1 Mouse shRNA Plasmid (Locus ID 67898)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** Pef1 Mouse shRNA Plasmid (Locus ID 67898)

**Locus ID:** 67898

Synonyms: 2600002E23Rik; Peflin

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: Pef1 - Mouse, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID =

67898). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: <u>BC019191, NM 026441, NM 026441.1, NM 026441.2, NM 026441.3, NM 026441.4</u>

UniProt ID: Q8BFY6

**Summary:** Calcium-binding protein that acts as an adapter that bridges unrelated proteins or stabilizes

weak protein-protein complexes in response to calcium. Together with PDCD6, acts as

calcium-dependent adapter for the BCR(KLHL12) complex, a complex involved in

endoplasmic reticulum (ER)-Golgi transport by regulating the size of COPII coats. In response to cytosolic calcium increase, the heterodimer formed with PDCD6 interacts with, and bridges

together the BCR(KLHL12) complex and SEC31 (SEC31A or SEC31B), promoting

monoubiquitination of SEC31 and subsequent collagen export, which is required for neural crest specification. Its role in the heterodimer formed with PDCD6 is however unclear: some evidence shows that PEF1 and PDCD6 work together and promote association between PDCD6 and SEC31 in presence of calcium. Other reports show that PEF1 dissociates from PDCD6 in presence of calcium, and may act as a negative regulator of PDCD6 (By similarity). Also acts as a negative regulator of ER-Golgi transport; possibly by inhibiting interaction

between PDCD6 and SEC31 (By similarity).[UniProtKB/Swiss-Prot Function]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
