nRNA Plasmids ff4 Rat shRNA Plasmid (Locus ID 303132) 03132
)3132
af4l
RS (TR20003)
npicillin
uromycin
etroviral plasmids
ff4 - Rat, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = 303132). ug purified plasmid DNA per construct 9-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.
<u>M 001107001, NM 001107001.1</u>
nese shRNA constructs were designed against multiple splice variants at this gene locus. To e certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .
riGene guarantees that the sequences in the shRNA expression cassettes are verified to prrespond to the target gene with 100% identity. One of the four constructs at minimum are uaranteed to produce 70% or more gene expression knock-down provided a minimum ansfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to valuate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must e used in comparison with the target-specific shRNA transfected samples. or non-conforming shRNA, requests for replacement product must be made within ninety 0) days from the date of delivery of the shRNA kit. To arrange for a free replacement with ewly designed constructs, please contact Technical Services at techsupport@origene.com. ease provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data referred).

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US
