| 'l - Rat, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID = ጋ5). 5µg purified plasmid DNA per construct er scrambled shRNA cassette in pRS Vector, TR30012, included for free. |
| 001108010, NM_001108010.1, NM_001108010.2, BC168944 |
| e shRNA constructs were designed against multiple splice variants at this gene locus. To rtain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> . |
| ene guarantees that the sequences in the shRNA expression cassettes are verified to spond to the target gene with 100% identity. One of the four constructs at minimum are anteed to produce 70% or more gene expression knock-down provided a minimum fection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to ate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly s knockdown, the gene expression level from the included scramble control vector must ed in comparison with the target-specific shRNA transfected samples. on-conforming shRNA, requests for replacement product must be made within ninety lays from the date of delivery of the shRNA kit. To arrange for a free replacement with \prime designed constructs, please contact Technical Services at techsupport@origene.com. e provide your data indicating the transfection efficiency and measurement of gene ession knockdown compared to the scrambled shRNA control (Western Blot data |
