#### SMA (FOLH1) Mouse Monoclonal Antibody [Clone ID: UMAB25] – UM500025 PSMA (FOLH1) Mouse Monoclonal Antibody [Clone ID: UMAB25] – UM500025

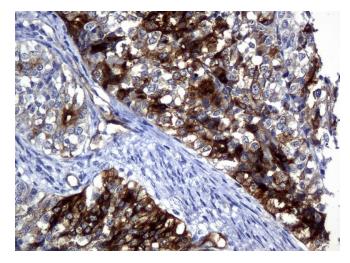

**Background:** This gene encodes a type II transmembrane glycoprotein belonging to the M28 peptidase family. The protein acts as a glutamate carboxypeptidase on different alternative substrates, including the nutrient folate and the neuropeptide N-acetyl-I-aspartyl-I-glutamate and is expressed in a number of tissues such as prostate, central and peripheral nervous system and kidney. A mutation in this gene may be associated with impaired intestinal absorption of dietary folates, resulting in low blood folate levels and consequent hyperhomocysteinemia. Expression of this protein in the brain may be involved in a number of pathological conditions associated with glutamate excitotoxicity. In the prostate the protein is upregulated in cancerous cells and is used as an effective diagnostic and prognostic indicator of prostate cancer. This gene likely arose from a duplication event of a nearby chromosomal region. Alternative splicing gives rise to multiple transcript variants encoding several different isoforms. OriGene overexpression protein microarray chip was immunostained with UltraMAB anti-FOLH1 mouse monoclonal antibody (Clone UMAB25). The positive reactive proteins are highlighted with two red arrows in the enlarged subarray. All the positive controls spotted in this subarray are also labeled for clarification. These data show that UltraMAB anti-FOLH1 (Clone UMAB25) very specifically recognizes FOLH1 antigen on OriGene protein microarray chip.
