S100P Mouse Monoclonal Antibody [Clone ID: UMAB24] - UM570024 Background: The protein encoded by this gene is a member of the S100 family of proteins containing 2 EFhand calcium-binding motifs. S100 proteins are localized in the cytoplasm and/or nucleus of a wide range of cells, and involved in the regulation of a number of cellular processes such as cell cycle progression and differentiation. S100 genes include at least 13 members which are located as a cluster on chromosome 1q21; however, this gene is located at 4p16. This protein, in addition to binding Ca2+, also binds Zn2+ and Mg2+. This protein may play a role in the etiology of prostate cancer. [provided by RefSeq]

Immunohistochemical staining of paraffinembedded mouse small intestine tissue using anti-S100P clone UMAB24 mouse monoclonal antibody. HIER TEE buffer pH9 ([B21-100]) at 110C for 10 min, [UM500024] (1:100). Detection was done with Klear Mouse (C/N [D52-18]) DAB Kit.

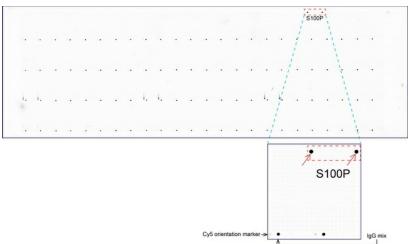

Equivalent amounts of cell lysates (10 ug per lane) of wild-type HeLa cells (WT, Cat# LC810HELA) and S100P-Knockout HeLa cells (KO, Cat# [LC810436]) were separated by SDS-PAGE and immunoblotted with anti-S100P monoclonal antibody [UM500024] (1:100`). Then the blotted membrane was stripped and reprobed with anti-PCNA antibody as a loading control.

Immunofluorescent staining of HeLa cells using anti-S100P mouse monoclonal antibody ([UM500024], green, 1:50). Actin filaments were labeled with Alexa Fluor® 594 Phalloidin (red), and nuclear with DAPI (blue).

OriGene overexpression protein microarray chip was immunostained with UltraMAB anti-S100P mouse monoclonal antibody (Clone UMAB24). The positive reactive proteins are highlighted with two red arrows in the enlarged subarray. All the positive controls spotted in this subarray are also labeled for clarification. These data show that UltraMAB anti-S100P (Clone UMAB24) very specifically recognizes S100P antigen on OriGene protein microarray chip.
